

TERA GRANT SIB S.R.L.

CUI RO 41334628

J32/1372/2019

Str. DOAMNA STANCA NR.5G

ȘELIMBĂR, SIBIU

Nr. raport: 129/12.04.2023

RAPORT DE EVALUARE

Imobilizari corporale de natura
cladirilor si teren

Municipiul Medgidia, judetul Constanta

Client si utilizator desemnat: PRIMARIA MUNICIPIULUI
MEDGIDIA, JUD. CONSTANTA

Datele, informațiile și conținutul prezentului raport fiind confidențiale, nu vor putea fi copiate sau citate, integral sau parțial, și nu vor fi transmise unor terți fără acordul prealabil în scris al TERA GRANT SIB S.R.L., al clientului și al utilizatorului desemnat

14.12.2022

Către: PRIMARIA MUNICIPIULUI MEDGIDIA

Actiunile evaluate sunt reprezentate de imobilizari corporale de natura constructii si teren dupa cum urmeaza:

Urmare a solicitării dumneavoastră, am procedat la evaluarea activelor indicate mai sus. Am efectuat inspecția activelor, am analizat piața imobiliară specifică și am estimat valoarea justa a activelor în cauză în vederea înregistrării în evidențele contabile ale proprietarului.

TERA GRANT SIB S.R.L., prin evaluatorul autorizat EPI, EI, EBM Paun Radu Constantin, membru ANEVAR cu legitimația nr. 15101, a evaluat proprietatea în calitate de evaluator independent, raportul de evaluare fiind întocmit în concordanță cu Standardele de evaluare a bunurilor 2022.

În baza informațiilor disponibile, în urma analizelor, metodelor și raționamentelor aplicate, opinia noastră este că valoarea justa a dreptului deplin de proprietate asupra activelor descrise în acest raport, la 14.12.2022, este:

- Valorile nu includ TVA;
- Valoarea justa estimata se refera la cladiri si teren ;
- Valoarea a fost exprimată ținând seama exclusiv de ipotezele, ipotezele speciale și aprecierile exprimate în prezentul raport și este valabilă în condițiile economice și juridice existente la data evaluării.

- Valoarea este valabilă numai pentru utilizarea precizată în raport.
- Valoarea reprezintă opinia evaluatorului privind valoarea justă a dreptului de proprietate asupra activelor, în ipoteza că acestea sunt libere de sarcini.

Cu deosebită considerație,
Paun Radu Constantin –
Evaluator Autorizat EPI, EI, EBM
Membru Titular ANEVAR

2. Certificarea evaluarii

Declarație evaluator:

Subsemnatul, îmi asum răspunderea privind conținutul și concluziile evaluării numai față de clientul și utilizatorul desemnat al lucrării și certific, în cunoștință de cauză și cu bună credință, că:

- ✓ Expunerile faptelor din acest raport sunt corecte și adevărate;
- ✓ Analizele, opiniile și concluziile raportate se limitează numai la ipotezele și ipotezele speciale prezentate și reprezintă analizele, opiniile și concluziile mele profesionale și imparțiale;
- ✓ Nu am niciun interes prezent sau viitor în proprietatea care constituie obiectul acestui raport și niciun interes personal legat de părțile implicate;
- ✓ Angajarea mea în această evaluare și onorariul pentru această evaluare nu sunt condiționate de raportarea unor rezultate predeterminate, de mărimea valorii estimate sau de o concluzie favorabilă unuia dintre utilizatorii desemnați ai raportului;
- ✓ Dețin cunoștințele și experiența necesară pentru efectuarea, în mod competent, a acestei lucrări;
- ✓ Nu mi-a fost oferită asistență profesională semnificativă din partea unor specialiști în alte domenii;

3. Termenii de referință ai evaluării

Identificarea evaluatorului	TERA GRANT SIB S.R.L. Paun Radu Constantin - Evaluator autorizat, membru ANEVAR, cu legitimația nr. 15101, specializările EPI, EI, EBM
Obiectul evaluării	Imobilizari corporale de natura cladirilor si teren aferent, ternuri libere, constructii speciale
Adresa proprietății	Toate imobilele sunt situate in Municipiul Medgidia, jud. Constanta
Scopul evaluării	Estimarea valorii juste a activelor menționate mai sus, așa cum este definită în Standardele de Evaluare a bunurilor 2022 și Standardele de Raportare Financiară relevante, în vederea înregistrării în evidențele contabile ale proprietarului.
Clientul si Utilizatorul raportului	Primaria MUNICIPIULUI MEDGIDIA
Proprietar	Primaria MUNICIPIULUI MEDGIDIA
Drepturi de proprietate evaluate	În cadrul prezentului raport a fost evaluat dreptul deplin de proprietate asupra imobilului analizat, deținut de către Primaria MUNICIPIULUI MEDGIDIA în baza actelor de proprietate. Dreptul de proprietate asupra activelor a fost preluat din documentele puse la dispozitia evaluatorului si anexate la raport. Evaluarea s-a realizat în ipoteza că dreptul de proprietate asupra activelor este liber de sarcini.
Tipul valorii estimate	<p>Având în vedere scopul si utilizarea evaluării, s-au avut în vedere recomandările Standardele de Evaluare a Bunurilor 2022 - SEV 300 Evaluări pentru raportarea financiară, precum și cele ale Standardelor de Raportare Financiară, în speță IFRS 5 – Active imobilizate deținute în vederea vânzării și activități întrerupte, IFRS 13 – Evaluarea la valoarea justă, precum și IAS 16 – Imobilizări corporale. Referitor la baza de evaluare, recomandările acestor standarde sunt:</p> <p>SEV 300, pct. 2: "... termenii de referință ai evaluării vor include identificarea Standardelor de Raportare Financiară aplicabile, inclusiv scopul contabil specific pentru care este cerută evaluarea."</p> <p>SEV 300, pct. 3: "tratamentul proprietății imobiliare deținute de o entitate poate fi diferit, acesta depinzând de faptul dacă este ocupată în scopul realizării obiectului de activitate al entității, este deținută ca o investiție, este un surplus față de cerințe sau, în cazul unei companii de dezvoltare imobiliară, este tratată ca un stoc comercial".</p>

IFRS 5, pct. 15: "O entitate trebuie să evalueze un activ imobilizat (sau grup destinat cedării) clasificat drept deținut în vederea vânzării, la valoarea cea mai mică dintre valoarea contabilă și valoarea justă minus costurile generate de vânzare."

SEV 300, G1: "Valoarea justă este prețul care ar fi încasat pentru vânzarea unui activ sau plătit pentru transferul unei datorii într-o tranzacție reglementată între participanții de pe piață, la data evaluării."

SEV 300, G2: "...referirile la participanții de pe piață, la o tranzacție normală, tranzacție ce are loc pe piața principală sau pe cea mai avantajoasă piață și pentru cea mai bună utilizare a unui activ, arată clar faptul că valoarea justă, conform IFRS-urilor, este coerentă, în general, cu conceptul de valoare de piață, conform SEV, îndeplinește cerința de evaluare la valoarea justă, conform IFRS 13, supusă unor ipoteze specifice cerute de către standardul de contabilitate, cum ar fi stipulările privind unitatea de cont sau ignorarea restricțiilor de vânzare."

Conform acestui standard, *valoarea de piață reprezintă suma estimată pentru care un activ sau o datorie ar putea fi schimbat(ă) la data evaluării, între un cumpărător hotărât și un vânzător hotărât, într-o tranzacție nepărtinitoare, după un marketing adecvat și în care părțile au acționat fiecare în cunoștință de cauză, prudent și fără constrângere.*

Metodologia de calcul a "valorii de piață" a ținut cont de scopul evaluării, tipul proprietății și de recomandările Standardelor de Evaluare a Bunurilor 2022.

Data evaluării	La baza efectuării evaluării au stat informațiile privind nivelul prețurilor la data de 14.12.2022, data la care se consideră valabile ipotezele luate în considerare precum și valorile estimate de către evaluator. Evaluarea a fost realizată în luna Decembrie 2022. Data evaluării este 14.12.2022.
Data raportului	14.12.2022
Natura și amploarea activităților evaluatorului. Inspekția proprietății	Inspekția a fost efectuată în data de 08.11.2022 de către evaluator autorizat Paun Radu Constantin, legitimație nr. 15101 în prezența reprezentanților proprietarului. Cu această ocazie, au fost preluate informații referitoare la activele evaluate, au fost analizate schițele existente și s-au fotografiat activele supuse evaluării. Nu s-au realizat investigații privind eventualele contaminări ale terenului sau amplasamentelor învecinate și nu au fost inspectate părțile ascunse ale cladirilor.
Moneda în care se exprimă valoarea	Opinia finală a evaluării este prezentată în LEI. Cursul de schimb LEU/EUR valabil la data de referință a evaluării (14.12.2022) este cel afișat de BNR,

estimată	și anume 4,9314 lei/EUR.
Conformitatea evaluării cu SEV	<p>Raportul de evaluare a fost realizat în concordanță cu reglementările Standardelor de Evaluare a Bunurilor 2022 și cu ipotezele și ipotezele speciale cuprinse în prezentul raport. Valoarea imobilului a fost determinată în conformitate cu standardele aplicabile, ținându-se cont de scopul pentru care s-a solicitat evaluarea, respectiv:</p> <ul style="list-style-type: none">✓ SEV 100 – Cadrul general;✓ SEV 101 – Termenii de referință ai evaluării;✓ SEV 102 – Documentare și conformare;✓ SEV 103 – Raportare;✓ SEV 104 – Tipuri ale valorii;✓ SEV 105 – Abordări și metode de evaluare;✓ SEV 230 - Drepturi asupra proprietății imobiliare;✓ SEV 300 – Evaluări pentru raportarea financiară✓ GEV 630 – Evaluarea bunurilor imobile.✓ IFRS 5 – <i>Active imobilizate deținute în vederea vânzării și activități întrerupte</i>✓ IFRS 13 – <i>Evaluarea la valoarea justă</i>✓ IAS 16 – <i>Imobilizări corporale.</i>
Procedura de evaluare	<p>Etapele parcurse pentru determinarea valorii de piață au fost:</p> <ul style="list-style-type: none">✓ documentarea, pe baza unei liste de informații solicitate clientului;✓ inspecția proprietății;✓ stabilirea limitelor și ipotezelor care au stat la baza elaborării raportului;✓ selectarea tipului de valoare estimată în prezentul raport;✓ deducerea și estimarea condițiilor limitative specifice obiectivului de care trebuie să se țină seama;✓ analiza tuturor informațiilor culese, interpretarea rezultatelor din punct de vedere al evaluării;✓ aplicarea metodei/metodelor de evaluare considerate oportună/e pentru determinarea valorii și fundamentarea opiniei evaluatorului.
Natura și sursa informațiilor pe care se bazează evaluatorul	<p>Documentele și schițele puse la dispoziție de către proprietarul imobilului, respectiv:</p> <ul style="list-style-type: none">✓ Documentații cadastrale/memorii tehnice;✓ Documente și evidente contabile. <p>Alte informații necesare existente în bibliografia de specialitate, respectiv:</p> <ul style="list-style-type: none">✓ Cursul de referință al monedei naționale afișat de BNR;✓ Publicații privind piața imobiliară.

✓ Articole din presă

Evaluatorii nu își asumă nici un fel de răspundere pentru datele puse la dispoziție de către client și proprietar și nici pentru rezultatele obținute în cazul în care acestea sunt viciate de date incomplete sau greșite.

Responsabilitatea față de terți

Prezentul raport de evaluare a fost realizat pe baza informațiilor furnizate de către client și de către proprietarul terenului, corectitudinea și precizia datelor furnizate fiind responsabilitatea acestora. Acest raport de evaluare este destinat scopului și utilizării precizate în cadrul acestui raport. Raportul este confidențial, strict pentru client și destinatar iar evaluatorul nu acceptă nici o responsabilitate față de o terță persoană, în nici o circumstanță.

Ipoteze semnificative

- ✓ Aspectele juridice se bazează exclusiv pe informațiile și documentele furnizate de către proprietarul imobilului și au fost prezentate fără a se întreprinde verificări sau investigații suplimentare. Se presupune că titlul de proprietate este bun și marketabil, în afara cazului în care se specifică altfel;
- ✓ Informația furnizată de către terți este considerată de încredere, dar nu i se acordă garanții pentru acuratețe;
- ✓ Se presupune că nu există condiții ascunse sau neaparente ale amplasamentelor: solului sau structurii clădirii (părților ascunse) care să influențeze valoarea. Evaluatorul nu-și asumă nici o responsabilitate pentru asemenea condiții sau pentru obținerea studiilor necesare pentru a le descoperi;
- ✓ Se presupune că amplasamentul este în deplină concordanță cu toate reglementările locale și republicane privind mediul înconjurător în afara cazurilor când neconcordanțele sunt expuse, descrise și luate în considerare în raport;
- ✓ Din informațiile deținute de către evaluator și din discuțiile purtate cu proprietarul, nu există nici un indiciu privind existența unor contaminări naturale sau chimice care afectează valoarea proprietății evaluate sau valoarea proprietăților vecine. Evaluatorul nu are cunoștință de efectuarea unor inspecții sau a unor rapoarte care să indice prezența contaminanților sau materialelor periculoase și nici nu a efectuat investigații speciale în acest sens. Valorile sunt estimate în ipoteza că nu există așa ceva. Dacă se va stabili ulterior că există contaminări pe orice proprietate sau pe oricare alt teren vecin sau că au fost sau sunt puse în funcțiune mijloace care ar putea să contamineze, aceasta ar putea duce la diminuarea valorii raportate;
- ✓ Evaluatorul consideră că presupunerile efectuate la aplicarea metodelor de evaluare au fost rezonabile în lumina informațiilor ce sunt disponibile la data evaluării;
- ✓ Valoarea de piață estimată este valabilă la data evaluării. Întrucât piața, condițiile de piață se pot schimba, valoarea estimată poate fi incorectă sau necorespunzătoare la un alt moment;
- ✓ S-a presupus că legislația în vigoare se va menține și nu au fost luate în calcul eventuale modificări care pot să apară în perioada următoare;
- ✓ Alegerea metodelor de evaluare prezentate în cuprinsul raportului s-a făcut

- ținând seama de tipul proprietatii, tipul valorii exprimate si de informațiile disponibile;
- ✓ Evaluatorul a utilizat în estimarea valorii toate informațiile pe care le-a avut la dispoziție la data evaluării referitoare la subiectul de evaluat neexcluzând posibilitatea existenței și a altor informații de care acesta nu avea cunoștință;
 - ✓ Intrarea în posesia unei copii a acestui raport nu implică dreptul de publicare a acestuia;
 - ✓ Evaluatorul, prin natura muncii sale, nu este obligat să ofere în continuare consultanță sau să depună mărturie în instanță relativ la proprietățile în chestiune, în afara cazului în care s-au încheiat astfel de înțelegeri în prealabil;
 - ✓ Nici prezentul raport, nici părți ale sale (în special concluzii referitoare la valori, identitatea evaluatorului) nu trebuie publicate sau mediatizate fără acordul prealabil al evaluatorului;
 - ✓ Raportul de evaluare este valabil în condițiile economice, fiscale, juridice și politice de la data întocmirii sale. Dacă aceste condiții se vor modifica concluziile acestui raport își pot pierde valabilitatea.
- Ipoteze speciale semnificative ✓
- Restricții de utilizare, difuzare sau publicare
- ✓ Intrarea în posesia unei copii a acestui raport nu implică dreptul de publicare a acestuia;
 - ✓ Evaluatorul, prin natura muncii sale, nu este obligat să ofere în continuare consultanță sau să depună mărturie în instanță relativ la proprietățile în chestiune, în afara cazului în care s-au încheiat astfel de înțelegeri în prealabil;
 - ✓ Raportul de evaluare este valabil în condițiile economice, fiscale, juridice și politice de la data întocmirii sale. Dacă aceste condiții se vor modifica concluziile acestui raport își pot pierde valabilitatea;
 - ✓ Orice valori estimate în raport se aplică activului evaluat, luat ca întreg și orice divizare sau distribuire a valorii pe interese fracționate va invalida valoarea estimată, în afara cazului în care o astfel de distribuire a fost prevăzută în raport;
 - ✓ Nici prezentul raport, nici părți ale sale (în special concluzii referitor la valori, identitatea evaluatorului) nu trebuie publicate sau mediatizate fără acordul prealabil al TERA GRANT SIB S.R.L. și al evaluatorului autorizat care semnează acest raport, cu specificarea formei și contextului în care urmează să apară. Publicarea, parțială sau integrală, precum și utilizarea lui de către alte persoane decât clientul și destinatarul raportului de evaluare, atrage după sine încetarea obligațiilor contractuale.

Identificarea
eventualelor bunuri
mobile evaluate

Nu au fost evaluate bunurile mobile amplasate în incinta proprietatii subiect. In vederea determinarii valorii de piata, au fost luate în calcul doar dotările permanente ale clădirii, cum ar fi instalațiile de apă, electrice, de încălzire, ca și componentele încorporate, cum ar fi tablourile electrice și ascensoarele.

Date despre zonă,
oraș, vecinătăți și
amplasare

- Medgidia este un municipiu din județul Constanța, Dobrogea, România. Este situat în centrul Podișului Dobrogei de Sud (Podișul Medgidiei). Înainte de 1850, localitatea era un cunoscut târg de cereale. În această perioadă localitatea s-a bucurat de atenția sultanului Abdul Medgid care a înzestrat-o atunci cu câteva edificii precum moscheea mare și baia turcească.
- In 1865, locuitorii solicita guvernatorului Dobrogei ca noua localitate sa fie denumita Medgidia, in semn de recunostinta pentru protectorul lor, Abdul Medgid. La numai cateva luni, orasul numara 15 – 20000 locuitori cu 1000 de case si multe altele in constructie.
- Pe Dealul Panaghirului, guvernul otoman intretinea de aproape 100 de ani iarmarocul unde se aflau construite pravalii si baraci. Negustori veniti din toata tara, chiar si de mai departe expuneau produse manufacturiere cu caracter agricol si casnic.
- In perioada targurilor care se tineau primavara si toamna, tribunalele de comert din Constanta si Tulcea se deplasau la Medgidia pentru a facilita tranzactiile comerciale. Dupa razboiul de independenta (1877 – 1878), Dobrogea a revenit la patria mama, Romania, iar Targul

Medgidia renaste si incepe sa se organizeze.

- In decembrie 1878 este ales Consiliul Comunal si constituita cancelaria Primariei. Un an mai tarziu aici se inregistreaza 300 de case cu 1500 de locuitori. Sa nu uitam ca timp de un an de zile, razboiul distrusese orasul si nenumarati cetateni se refugiasera in alte zone.
- Anul 1882 este marcat prin infiintarea spitalului comunal si a primei farmacie din oras. Cresterea populatiei se face intr-un ritm moderat, astfel incat in 1884 sunt inregistrati 2449 locuitori, iar in 1903 in 879 de case locuiesc 2858 de suflete. In 1886 se ridica o scoala primara mixta pentru copiii saraci ai orasului. Aceasta era a treia scoala care se infiinta in Medgidia, o scoala de baieti si una de fete, se construiera in 1879.
- Interesul pentru Medgidia pare a-i cuprinde si pe scriitorii de literatura stiintifico-fantastica. Jules Verne publica in 1883 nuvela Keraban incapatanatul in care eroii cartii ajung in Dobrogea si poposesc la Medgidia.
- La 1901, orasul Medgidia avea 36 de strazi, cateva pavate sau pietruite, 7 mici hoteluri si 10 hanuri. Era printre celelalte localitati ale judetului, cea mai dezvoltata. Activitatea culturala a orasului Medgidia este bine intretinuta pe de o parte de comercianti, industriasi, agricultori care nu precedau sa investeasca in manifestari spirituale precum construirea de biblioteci publice dar si de catre primaria care avea in bugetul anual ca destinatie speciala fonduri pentru propasirea miscarii artistice si culturale.
- In august 1936, apare la Medgidia prima revista intitulata Graiul Dobrogei. In 1940, tara intra in razboi, nenumarati au fost soldatii care au plecat din Medgidia sa lupte pe front, infruntand moartea. Pana la izbucnirea razboiului, Medgidia era incontestabil orasul cu oamenii cei mai instariti, ba chiar fara sa se fi facut o statistica, din numarul total al locuitorilor cel putin jumătate detineau suprafete mari de teren, monopolul comerțului si industriei. După terminarea razboiului, tavalugul comunist a inceput cu deposedarea pamanturilor.
- La 27 februarie 1965, a fost inaugurat complexul sanitar format dintr-un spital si o policlinica moderna. In anul 1970 orasul dispunea de o baie publica cu o capacitate de deservire de 40 locuri, un hotel cu 52 locuri si 60 abonati telefonici. 1989 – anul care a schimbat cursul istoriei. La Medgidia, asemena intregii tari, oamenii au reactionat spontan si au incercat sa restabileasca intrarea in normalitate.
- Prima actiune a consiliului orasenesc Medgidia al Frontului Salvarii Nationale a fost platforma program de actiune intocmita in dimineata zile de 23 decembrie 1989 si transcrisa intr-o editie speciala intitulata Zori noi, multiplicata la xerox si difuzata in oras. In aceasta perioada, oamenii incearca sa reconstituie imaginea unui patrimoniu distrus, sa-si revendice drepturi, sa participe voluntar cu sugestii si fapte la refacerea materiala si spirituala a orasului.
- In ianuarie 1990 apare prima publicatie literara a Medgidiei intitulata Metamorfoze apartinand Cenaclului Literar Omonim. Anul 1994 aduce Medgidiei o mare implinire, devenirea orasului, MUNICIPIU.

- Perioada comunistă va aduce industrializare după modelul sovietic, prin apariția unor întreprinderi de mari dimensiuni, precum I.M.U. Medgidia și Fabrica de Cement din Medgidia, care atrăgeau ca un magnet forța de muncă din zonă. La acest lucru și-a adus contribuția și Canalul Dunăre – Marea Neagră, ale căror lucrări au demarat, la inițiativă sovietică în 1949 și care au atras forță de muncă, stabilită ulterior în zonă, dar cu precădere în oraș. În sprijinul acestui argument, venim cu creșterea numărului de locuitori de la 6.916 în 1948, la 17.943 în 1956.
- Investiții au fost făcute în agricultură, zootehnie, pomicultură și viticultură. Vinurile din Medgidia au devenit cunoscute în țară și în străinătate.
- După 1990, sub semnul restructurării și privatizării, unele întreprinderi s-au închis, altele au fost privatizate cu succes, iar altele, nu și-au găsit locul pe piața nou creată, după dispariția blocului comunist și al C.A.E.R. Au apărut în schimb întreprinderi private, care s-au adaptat noilor cerințe ale economiei de piață.
- Autoritățile locale sunt interesate de înființarea unui parc industrial care să ofere o alternativă tinerilor și să contribuie la dezvoltarea economică a localității. De asemenea, se dorește crearea unui parc eolian care să aducă locuri de muncă noi, dar și resurse financiare pentru administrația locală. Toate aceste inițiative laudabile nu au ca scop final decât prosperitatea așezării și a locuitorilor săi.
- Accesul în zonă se realizează cu ajutorul mijloacelor de transport în comun și a autovehiculelor personale
- Unități comerciale în apropiere: în zonele centrale, mici magazine de aprovizionare;
- Unități de învățământ: Da
- Unități medicale: Da
- Instituții de cult: Da
- Sedii de bănci: Nu
- Instituții publice: Da
- Parcuri: Da
- Lacuri: Nu
- Cursuri de apă: Da
- Altele: -

Descrierea amenajărilor și construcțiilor

Cladirile edilitare și construcțiile speciale supuse evaluării sunt descrise în centralizatorul anexat.

Cele mai multe clădiri din patrimoniul comunei au regim de înălțime parter, puține dintre acestea au și un etaj. Acestea sunt scoli, clădiri administrative, dispensare, grădinițe, centru de informare turistică, etc.. Majoritatea sunt clădiri clasice, construite din cărămidă, beton armat și lemn cu învelișuri din țiglă și tablă. Finisajele clădirilor sunt clasice, de calitate medie, uzate mai mult sau mai puțin în funcție de anul reabilitării. Clădirile au instalații interioare funcționale, de calitate medie.

Ca și construcțiile speciale raportul de evaluare cuprinde cai de comunicații,

poduri, podete, cisele, fantini, aductiuni de apa cu statie de tratare, retele de apa, canalizari, imprejmui, amanajare pietee, etc.

Pe linga aceste edificate, patrimoniul comunei este compus din terenul aferent cladirilor si constructiilor speciale si a cailor de comunicatii.

Date privind
impozitele și taxele

Valorile impozabile, impozitele și taxele locale și alte taxe asimilate acestora sunt stabilite prin Codul fiscal, cu modificarile si completarile ulterioare, Titlul IX.

Analiza pieței
imobiliare. Studiu
de vandabilitate

Piața imobiliară se definește ca un grup de persoane sau firme care intră în contact în scopul de a efectua tranzacții imobiliare. Participanții la această piață schimbă drepturi de proprietate contra unor bunuri, cum sunt banii.

Spre deosebire de piețele eficiente, piața imobiliară nu se autoreglează ci este deseori influențată de reglementările guvernamentale și locale.

Oferta pentru un anumit tip de cerere se dezvoltă greu, iar cererea poate să se modifice brusc, fiind posibil astfel ca de multe ori să existe supraofertă sau exces de cerere și nu echilibru. Cumpărătorii și vânzătorii nu sunt întotdeauna bine informați, iar actele de vânzare-cumpărare nu au loc în mod frecvent. De multe ori, informațiile despre prețuri de tranzacționare sau nivelul ofertei nu sunt imediat disponibile.

Proprietățile imobiliare sunt durabile și pot fi privite ca investiții. Sunt puțin lichide și de obicei procesul de vânzare este lung.

ANALIZA PIETEI IMOBILIARE ESTE UN PROCES IN SASEPASI:

- Pasul 1. Definirea produsului imobiliar
(analiza productivității proprietății)
- Pasul 2. Delimitarea pieței specifice
(aria pieței și aria competitivă)
- Pasul 3. Analiza ererii
- Pasul 4. Analiza ofertei
(investigarea și previziunea concurenței)
- Pasul 5. Analiza interacțiunii dintre cerere și ofertă
- Pasul 6. Previziunea absorbției proprietății subiect în piață
(conceptele penetrării de piață)

Pasul 1. Definirea produsului imobiliar (analiza productivității proprietății)

In aceasta prima etapa sunt identificate caracteristicile proprietății subiect care determină capacitatea sa productivă și utilizările potențiale ale proprietății. Aceste caracteristici pot fi fizice, juridice sau de localizare; acestea urmand a fi baza pentru selectarea proprietăților comparabile, precum și pentru concluziile cu privire la modelarea cererii marginale previzionate.

Atributele fizice, juridice și localizarea imobilului au fost prezentate anterior, proprietatea imobiliară evaluată este de tip proprietati imobiliare

tip spatii administrative, de birouri, socio-culturale si locuinte aflate in aria MUNICIPIULUI MEDGIDIA, judet Constanta.

Utilizările potențiale ale proprietății sunt:

- o Administrativ
- o Edilitar

Din analiza trendului pieței am constatat că cererea existentă in comuna este redusa, piata imobiliara locala este putin activa.

Pe de alta parte, imobilele aflate in patrimoniu sunt dificil sau imposibil de utilizat in alte destinatii – rezidential, comercial sau industrial.

In functie de nevoile, dorintele, motivațiile, localizarea, tipul si varsta participantilor la piata, pe de o parte si tipul, amplasarea, design si restrictii privind proprietatile, pe de alta parte, s-au creat tipuri diferite de piete imobiliare (rezidentiale, comerciale, industriale, agricole, speciale). Acestea, la randul lor, pot fi impartite in piete mai mici, specializate, numite subpiete, acesta fiind un proces de segmentarea a pietei si dezagregare a proprietatii.

Aspectele privind caracteristicile economice, legale si fizice ale proprietatii imobiliare subiect, așa cum au fost prezentate și analizate în capitolele precedente, conduc la concluzia ca proprietatea supusa evaluarii este de tip proprietati imobiliare - spatii administrative, socio-culturale si edilitare aflate in aria MUNICIPIULUI MEDGIDIA, judet Constanta.

Pasul 2. Delimitarea pieței specifice (aria pieței și aria competitivă)

Segmentarea pieței se impune a fi efectuată încă de la început, pentru a reduce eforturile și a concentra căutările spre a găsi cele mai bune informații cu grad mare de asimilare proprietăților de evaluat.

Analiza pieței specifice presupune cercetarea condițiilor pieței imobiliare specifice proprietatii subiect, precum si examinarea cererii și ofertei și a ariei geografice de piață pentru tipul de proprietate analizat.

Pentru identificarea pieței imobiliare specifice proprietatii subiect au fost analizati o serie de factori:

- o *Tipul proprietatii imobiliare:* cladiri edilitare;
- o *Caracteristicile proprietatii imobiliare:*
 - *Modul de ocupare/utilizare:* in majoritatea cazurilor acest tip de proprietate este ocupata de un singur utilizator;
 - *Baza de clienți (potențialii utilizatori):* teoretic pot fi persoane fizice sau juridice care sunt dispuse sa cumpere cladiri de utilitate publica care, printr-un proces de reconversie, sa fie utilizate in alta destinatie;

- *Calitatea construcției:* buna (nu au fost identificate informații care să indice existența unor probleme ale structurii de rezistență);
- *Caracteristicile dotarilor:* dotări de calitate medie, specifice acestui tip de proprietăți;
- *Design-ul și funcționalitatea:* adecvate tipului de utilizare pentru care au fost edificate;
- *Aria pieței:* locală, au fost analizate toate informațiile disponibile, referitoare la proprietăți substituite, oferite spre vânzare/inchiriere în Municipiul Medgidia, jud. Constanța și în alte zone din județ cu piața apropiată sau similară
- *Proprietăți substituite disponibile:* nu au fost identificate proprietăți (disponibilitate curentă și viitoare) cu o atractivitate similară, ce concurează cu proprietățile subiect, în aria de piață definită.
- *Proprietăți complementare :* sunt accesibile următoarele facilități suport ale funcțiunii analizate: unități comerciale (magazine), parcuri, proprietăți rezidențiale;

În concluzie, ținând cont de toate aspectele prezentate anterior, precum și de specificul zonei, putem afirma că piața specifică este cea a proprietăților imobiliare tip spații administrative, de birouri, socio-culturale și edilitare, terenuri aflate în aria MUNICIPIULUI MEDGIDIA, județ Constanța, situate în Municipiul Medgidia, jud. Constanța și în zona cu piața imobiliară similară din județ.

Pasul 3. Analiza cererii

Cererea reflectă nevoile, dorințele, puterea de cumpărare și preferințele consumatorilor produsului imobiliar. Analiza cererii se axează pe identificarea utilizatorilor potențiali (cumpărători și chiriași) pentru proprietățile subiect. Pentru aceasta se urmăresc activități / utilizări care pot susține proprietatea așa cum este ea construită sau cum ar putea deveni după unele lucrări de modificare (dacă se demonstrează că ar fi logic și favorabil a se efectua aceste modificări).

Cererea trebuie urmărită mai ales pe segmentul de piață *al celor cu interes de a achiziționa un imobil, îl doresc și pot (au puterea financiară) să-l și achiziționeze.*

Nivelul cererii pentru un anumit tip de proprietate determină atractivitatea proprietăților similare. Pentru acest tip de proprietăți nivelul cererii este inexistent. Cererea pentru proprietățile subiect nu pot fi acoperite de o cerere, cu excepția terenurilor libere cu altă destinație de cai de acces.

În ceea ce privește modalitatea de plată vizată pentru o eventuală achiziție, distribuția potențialilor cumpărători a rămas relativ aceeași ca în trecut: o mică parte dintre cumpărători au resurse financiare și intenționează să facă

plata cash pentru imobilul dorit, în timp ce marea majoritate au în plan să contracteze un credit bancar. În ceea ce privește închirierea acestor tipuri de proprietate, cererea este inexistentă.

La capitolul criteriilor de selecție a unor proprietăți de acest tip, în vederea închirierii, amplasamentul este factorul cu cea mai mare greutate, urmat fiind de mărimea chiriei. Pe locul al treilea în clasamentul priorităților se află confortul imobilului și de vechimea acestuia.

Concluzii privind *Cererea solvabilă* specifică pentru acest tip de proprietate:

- *Cererea pentru cumpărare* – inexistentă, cu excepția terenurilor libere care au o piață.
- *Cererea pentru închiriere* – inexistentă;
- *Potențialii cumpărători și chiriași/utilizatori*: nu există.
- *Interesul investitional*: este inexistent. Clientul investitional este interesat de imobile ușor închiriable, localizate în lungul arterelor principale, pentru care cheltuielile de exploatare înregistrează un quantum cât mai mic;
- *Preferințele manifestate pe piață*: în general, în principal, sunt solicitate unitățile cu suprafețe mai mici, adecvate specificului activității, amplasate în zone centrale sau semicentrale, o cerere mult mai mică existând pentru spațiile cu suprafețe excedentare și cele situate la marginea localităților. Pe de altă parte, un criteriu foarte important în alegerea unei proprietăți îl reprezintă existența sau lipsa locurilor de parcare.
- *Standarde de calitate*: în principal sunt căutate spațiile amenajate / modernizate, în detrimentul celor care necesită investiții importante imediat ce au fost achiziționate/inchiriate;
- *Dimensiunea proprietății*: în general sunt solicitate unități cu suprafețe mai mici, adecvate specificului activității, o cerere mult mai mică existând pentru spațiile cu suprafețe excedentare.

Pasul 4. Analiza ofertei (investigarea și previziunea concurenței)

Oferta se referă la disponibilitatea produsului imobiliar în diferitele lui faze de dezvoltare. Un cumpărător are alternativa de a achiziționa/închiria de pe piață un număr mai mare de proprietăți cu caracteristici asemănătoare. În competiție cu acestea ar putea intra și proprietățile subiect, dacă configurația și destinația lor ar fi atractive pe piață.

Oferta aferentă proprietăților disponibile spre vânzare / închiriere (doar acestea prezintă interes, nu cele care sunt similare dar nu sunt expuse spre vânzare / închiriere) care sunt asimilabile (caracteristicilor și utilității) proprietății subiect se numește ofertă competitivă.

Existența ofertei pentru o anumită proprietate la un anumit moment, anumit preț și un anumit loc indică gradul de raritate a acestui tip de proprietate.

Pe segmentul proprietatilor tratate in acesta lucrare, numarul tranzactiilor este inexistent, aceste tipuri de proprietate fiind edificate pentru folosul comunitatilor si nu fac obiectul unor tranzactii comerciale

În ceea ce privește oferta competitivă pentru proprietatea de tip teren, in urma analizei de piata au rezultat urmatoarele informatii:

- oferta de vanzare – scazuta, asezata pe un trend de scadere;
- oferta de inchiriere – inexistentă;
- stocul total disponibil – insuficient, aflat in stagnare;
- volumul de livrari asteptate: nu sunt asteptate;
- marja de negociere la vanzare (oferte mature): intre 5 și 20% (pentru terenuri); (Reprezintă raportul dintre prețul din oferta maturizata și prețul la care se încheie tranzacția).
- prețurile solicitate pentru închiriere: nu este cazul
- gradul de ocupare: nu este cazul
- oferta de vanzare teren liber: 15-35 euro/mp – teren intravilan
- oferta vanzare teren pasune/agricol – 3500-7500 Eur/Ha.

În anexele raportului de evaluare sunt prezentate cotații (oferte de vânzare,) colectate din piata specifica proprietății subiect – in cazul terenurilor.

Passul 5. Analiza interacțiunii dintre cerere și ofertă

Valoarea de piață a unei proprietăți imobiliare este, în cea mai mare măsură, dependentă de poziția sa competitivă pe piața specifică.

Cunoscând caracteristicile proprietăților imobiliare evaluate, nu putem identifica și selecta alte proprietățile imobiliare competitive (oferta) și nu putem înțelege avantajele/dezavantajele comparative pe care proprietatile subiect le-o prezintă potențialilor cumpărători (cererea) in cazul constructiilor. In situatia terenurilor au fost identificate proprietati imobiliare competitive.

Pentru a evidenția conformările pieței pentru o anumită utilizare a unei proprietăți imobiliare, trebuie identificata relația dintre cererea (solvabilă și probabilă) și oferta concurențială de pe piața analizată – curentă și viitoare. Această relație arată gradul de echilibru (sau dezechilibru) care caracterizează piața curentă și condițiile ce ar caracteriza piața după o perioadă de prognoză. Pe termen scurt, oferta imobiliară este relativ fixă și prețul răspunde la cerere. Comparând cererea existentă și potențială cu oferta curentă și anticipată competitivă se poate determina dacă există cerere pentru un număr mai mare de imobile. In cazul de fata, aceste elemente pot fi aplicate in cazul terenurilor.

Mentionam ca in situatia in care UAT-ul doreste sa achizitioneze teren pentru edificarea de drumuri, cumpararea/exproprierea se va efectua la

pretul de piata al terenurilor din zona.

Ținând cont de informațiile existente în piață la data evaluării, pentru acest tip de proprietate putem reliefa următoarea situație:

- În ce privește vânzarea, piața este caracterizată printr-o cerere scăzută. O astfel de piață este uneori numită piață a cumparatorilor întrucât aceștia pot obține preturi mai mici pentru proprietățile imobiliare disponibile (Acela care dorește proprietatea „impune” pretul).
- În ce privește închirierea putem spune că nu există o piață.

Pasul 6. Previziunea absorbției proprietăților subiect în piață

Prin compararea caracteristicilor proprietății subiect cu cele ale proprietăților competitive, putem determina absorbția proprietății subiect, în condițiile de piață, cerere și ofertă competitivă cunoscute – în cazul terenurilor.

În prezent în apropierea României se desfășoară un conflict armat; acest conflict a generat sancțiuni internaționale fără precedent. Sancțiunile radicale aplicate în prezent împotriva Rusiei vor avea consecințe de amploare. Prețurile energiei și ale materiilor prime au urcat, adăugându-se la inflația existentă. Economii europene sunt cele mai expuse la risc; se anticipează că țările care au legături economice strânse cu Ucraina și Rusia vor fi afectate în mod deosebit, existând un risc deosebit de penurie și de întrerupere a aprovizionării, pe lângă presiunea cauzată de aflulxul de refugiați.

5. Analiza datelor și concluziilor

Cea mai bună utilizare

Cea mai bună utilizare (CMBU) este primul punct de analiză paralelă a variantelor de utilizare a proprietăților și a pieței specifice ce ar pune cel mai bine în valoare proprietatea. Variantele de utilizare *posibile fizic și permise legal* selectate în mod rezonabil sunt trecute apoi prin filtrul fezabilității financiare, selecția finală oprindu-se la una dintre utilizări demonstrată/justificată a fi cea mai bună.

Cea mai bună utilizare este definită ca fiind „Utilizarea probabilă în mod rezonabil și justificată adecvat, a unui teren liber sau a unei proprietăți construite, utilizare care trebuie să fie posibilă din punct de vedere fizic, permisă legal, fezabilă financiar și din care rezultă cea mai mare valoare a proprietății imobiliare”

Cea mai bună utilizare este analizată în următoarele situații:

- Cea mai bună utilizare a terenului liber sau considerat a fi liber – nu este cazul (scop raportare financiară – continuarea activității);
- Cea mai bună utilizare a proprietății ca fiind construită.

Cea mai bună utilizare a unei proprietăți este determinată după aplicarea

celor patru criterii și după eliminarea diferitelor utilizări alternative. Utilizarea rămasă, care îndeplinește toate cele patru criterii, este cea mai bună utilizare.

Cea mai bună utilizare a proprietății considerată construită

Cea mai bună utilizare a proprietății ca fiind construită reprezintă utilizarea pe care trebuie să o aibă o construcție prin prisma tipului construcției existente pe teren și a utilizării ideale a terenului considerat liber identificate în subcapitolul aferent.

Având în vedere cele de mai sus, considerăm că terenurile sunt deja construite conform celei mai bune utilizări ale acestora. Ca urmare *cea mai bună utilizare a proprietăților considerate construite* este cea actuala .

Aceste utilizari indeplinesc criteriile care definesc CMBU, și anume:

- o *este fizic posibilă*
- o *este permisă legal*
- o *este fezabilă financiar*
- o *este maxim productivă (conduce la cea mai mare valoare a terenului (considerat) liber și a proprietății construite)*

Evaluarea
terenului

Valoarea terenului trebuie estimată având în vedere cea mai bună utilizare a acestuia. Chiar dacă terenul are amenajări, valoarea acestuia este estimată prin luarea în considerare a celei mai bune utilizari a lui, și anume, prin considerarea lui ca fiind liber și disponibil pentru dezvoltare ulterioară, respectiv pentru utilizarea cea mai eficientă.

Comparația directă este cea mai utilizată tehnică pentru evaluarea terenului și cea mai adecvată metodă atunci când există informații disponibile despre tranzacții/oferte comparabile.

În aplicarea acestei metode sunt analizate și comparate informațiile privind tranzacțiile/ofertele și alte date privind loturi similare, în scopul evaluării proprietății subiect.

În cadrul acestei tehnici, vânzările de loturi vacante similare sunt analizate, comparate și corectate pentru a obține o indicație asupra valorii terenului evaluat.

Anexat raportului sunt prezentate datele despre vânzări sau cotații ale unor loturi de teren similare sau asemănătoare cu cel evaluat. Aceste date au fost verificate pentru valabilitate și corectitudine prin contactarea vânzătorului.

În anexele raportului sunt prezentate *Grila comparațiilor de piață pentru terenuri intravilane și extravilane*. În urma aplicării corecțiilor asupra prețurilor terenurilor comparabile, a rezultat valoarea de piață a lotului de teren standard analizat.

Abordări în evaluare

Pentru a obține valoarea definită de tipul valorii adecvat se pot utiliza una sau mai multe abordări în evaluare. Cele trei abordări descrise și definite în SEV 100 - Cadru general sunt abordările principale utilizate în evaluare. Ele sunt fundamentate pe principiile economice ale prețului de echilibru, anticipării beneficiilor sau substituției. Atunci când nu există suficiente date de intrare reale sau observabile încât să se poată obține o concluzie credibilă din aplicarea unei singure metode, se recomandă în mod special utilizarea a cel puțin două abordări sau metode.

Abordarea prin piață

Abordarea prin piață este procesul de obținere a unei indicații asupra valorii proprietății imobiliare subiect, prin compararea acesteia cu proprietăți similare care au fost vândute recent sau care sunt oferite pentru vânzare.

Abordarea prin piață este aplicabilă tuturor tipurilor de proprietăți imobiliare, atunci când există suficiente informații credibile privind tranzacții și/sau oferte recente credibile.

Atunci când există informații disponibile, abordarea prin piață este cea mai directă și adecvată abordare ce poate fi aplicată pentru estimarea valorii de piață.

Dacă nu există suficiente informații despre tranzacții recente cu proprietăți comparabile se pot utiliza informații privind oferte de proprietăți similare disponibile pe piață, cu condiția ca relevanța acestor informații să fie clar stabilită și analizată critic.

Având în vedere lipsa informațiilor cu privire la oferte/tranzacții cu proprietăți similare din zona analizată - în cadrul acestui raport nu a fost aplicată *abordarea prin piață*.

Abordare prin venit

Abordarea prin venit este procesul de obținere a unei indicații asupra valorii proprietății imobiliare subiect, prin aplicarea metodelor pe care un evaluator le utilizează pentru a analiza capacitatea proprietății subiect de a genera venituri și pentru a transforma aceste venituri într-o indicație asupra valorii proprietății prin tehnici de actualizare.

Abordarea prin venit este aplicabilă oricărei proprietăți imobiliare care generează venit la data evaluării sau care are acest potențial în contextul pieței (proprietăți vacante sau ocupate de proprietar).

În cadrul acestui raport nu a fost aplicată *metoda capitalizării directe*.

Avand in vedere lipsa informatiilor cu privire la oferte/tranzactii cu proprietati similare din zona analizata - in cadrul acestui raport nu a fost aplicată *abordarea prin venit*.

Abordarea prin cost – estimarea costului de inlocuire net

Abordarea prin cost este procesul de obținere a unei indicații asupra valorii proprietății imobiliare subiect prin deducerea din costul de nou al construcției/construcțiilor a deprecierii cumulate și adăugarea la acest rezultat a valorii estimate a terenului la data evaluării.

Utilizarea abordării prin cost poate fi adecvată atunci când proprietatea imobiliară include:

- construcții noi sau construcții relativ nou construite;
- construcții mai vechi, cu condiția să existe date suficiente și adecvate pentru estimarea deprecierii acestora;
- construcții aflate în faza de proiect;
- construcții care fac parte din proprietatea imobiliară specializată.

Metodele de estimare a costului de nou pentru evaluarea proprietăților imobiliare sunt: metoda comparațiilor unitare, metoda costurilor segregate și metoda devizelor.

În cadrul acestui raport a fost aplicată *metoda costurilor segregate pentru estimarea costului de inlocuire net al cladirilor*.

În anexe este prezentată aplicarea metodei *costurilor segregate*. În urma deducerii deprecierii cumulate din costul de nou estimat, a rezultat costul de înlocuire net al activelor.

Analiza rezultatelor și concluzia asupra valorii

Criteriile care au stat la baza estimării finale a valorii, fundamentată și semnificativă, sunt: *adecvarea, precizia și cantitatea de informații*.

Adecvarea:

Prin acest criteriu, evaluatorul judecă cât de pertinentă este fiecare metodă, scopului și utilizării evaluării. Adecvarea unei metode, de regulă, se referă direct la tipul proprietății imobiliare și viabilitatea pieței.

Precizia:

Precizia unei evaluări este măsurată de încrederea evaluatorului în corectitudinea datelor, de calculele efectuate și de corecțiile aduse prețurilor de vânzare a proprietăților comparabile.

Cantitatea informatiilor:

Adecvarea și precizia influențează *calitatea* și relevanța rezultatelor unei metode. Ambele criterii trebuie studiate în raport cu *cantitatea* informațiilor

evidențiate de o anumită tranzacție comparabilă sau de o anumită metodă. Chiar și datele care îndeplinesc criteriile de adecvare și precizie pot fi contestate dacă nu se fundamentează pe suficiente informații. În termeni statistici, intervalul de încredere în care va fi valoarea reală, va fi îngustat de informațiile suplimentare disponibile.

Luând în calcul *criteriul adecvării*, cea mai potrivită metodă, având în vedere tipul activelor (cladiri și teren aferent) și scopul evaluării (înregistrare în contabilitate), este estimarea costului de înlocuire net. Această metodă îndeplinește *criteriul preciziei și criteriul cantității și calității informațiilor*.

Luând în considerare cele de mai sus, opinia evaluatorului este că abordarea cea mai adecvată în cazul de față este abordarea prin cost.

Astfel, valoarea justă a activelor a fost estimată la:

Nr. crt	Denumire	Nr. inventar	Valoare inventar (Lei)	Valoare justă la 14.12.2022 (Lei)

Anexa 1 - Evaluarea terenului

Comparația directă este metoda recomandată în primul rând pentru evaluarea terenului. Comparația directă poate fi utilizată pentru evaluarea terenului liber sau considerat liber pentru scopul evaluării. Comparația directă este cea mai utilizată metodă pentru evaluarea terenului și cea mai preferată metodă atunci când sunt disponibile vânzări de terenuri comparabile.

În aplicarea acestei metode sunt colectate, analizate, comparate și ajustate vânzările de loturi și alte date privind parcele similare, în scopul estimării valorii terenului subiect. În procesul de comparație sunt luate în considerare asemănările și deosebirile dintre loturile similare și terenul subiect.

Variabilele luate cel mai des în considerare ca elemente de comparație sunt caracteristicile fizice ale terenului, care se referă la mărimea și forma acestuia, deschiderea la drumul de acces, topografia, localizarea și priveliștea.

Etapile sunt următoarele:

- 1) Sunt colectate date despre vânzările și închirierile finalizate și ofertele active;
- 2) Identificarea asemănărilor și diferențierile dintre aceste date;
- 3) Sortarea informațiilor în funcție de relevanța lor;
- 4) Ajustarea prețurilor comparabilelor pentru a justifica diferențele față de caracteristicile terenului subiect;

Mai jos este prezentată determinarea valorii de piață prin metoda comparației de piață.

PROCESUL DE OBTINERE A INFORMATIILOR RELEVANTE PRIVIND EVALUAREA TERENULUI
<p>În vederea obținerii de informații relevante din piața specifică proprietății imobiliare subiect, au fost parcurse următoarele patru etape principale:</p> <p>1. <i>Planificarea</i> – În această etapă au fost evidențiate caracteristicile proprietății subiect, determinate în baza informațiilor furnizate de client, informațiilor culese din surse publice de informații și informațiilor culese în timpul inspecției în teren. Caracteristicile considerate relevante includ tipul imobilului, dreptul de proprietate transmis, condițiile de finanțare și vânzare, adresa, amplasarea, suprafața, utilitățile disponibile, accesul, vecinătățile, punctele de interes, principalele artere din zonă etc.</p> <p>2. <i>Colectarea</i> – Această etapă presupune culegerea informațiilor din diverse surse de informații și validarea acestora ori de câte ori este posibil prin verificări încrucșate.</p> <p>3. <i>Analiza</i> – Procesul de analiză are ca scop filtrarea informațiilor, în vederea restrângerii intervalului și identificării de oferte ale unor proprietăți imobiliare similare imobilului evaluat.</p> <p>4. <i>Diseminarea</i> – Presupune finalizarea procesului de obținere a informațiilor relevante și are la bază sinteza etapelor anterioare, prin raportarea într-un format clar și concis a informațiilor relevante identificate.</p> <ul style="list-style-type: none">● În cazul prezentei evaluări, procesul de obținere a informațiilor relevante s-a concretizat prin completarea "fișei de colectare a informațiilor de piață", cu date și informații verificate și documentate, privind proprietăți imobiliare similare - oferite spre vânzare, valabile la data evaluării.● Proprietățile imobiliare prezentate în fișa de colectare au caracteristici fizice, juridice și economice similare cu cele ale proprietății subiect (caracteristici care pot fi în mod credibil și rezonabil ajustate pentru ca proprietatea comparabilă să reprezinte un substitut al proprietății subiect).

*Conform GEV 630/art. 56, selectarea concluziei asupra valorii este determinata de proprietatea imobiliara (Co_A), care este cea mai apropiata dpdv fizic, juridic si economic de proprietatea imobiliara subiect si asupra pretului careia s-au efectuat cele mai mici ajustari brute.

Curs valutar BNR: 4.9314 lei/€

JUSTIFICAREA AJUSTARILOR APLICATE IN CADRUL COMPARATIEI DIRECTE:

AJUSTARE PENTRU TIPUL COMPARABILEI - OFERTA / TRANZACTIE

Având în vedere faptul că prop. comparabile utilizate sunt oferte de vânzare și nu tranzacții, pt a ajunge la un preț estimat de vânzare s-a discutat telefonic cu fiecare dintre ofertanți și s-a negociat fiecare proprietate comparabilă.

AJUSTARI SPECIFICE TRANZACȚIONARII

Nu au fost aplicate ajustări pentru elementele specifice tranzacționării pt niciuna din proprietățile comparabile utilizate, deoarece acestea sunt similare cu proprietatea de evaluat din punct de vedere al celor cinci elemente de comparație specifice tranzacționării.

AJUSTARE PENTRU LOCALIZARE

Ajustările pt localizare, de regula exprimate procentual, se aplică atunci când caracteristicile de poziționare în zonă ale imobilelor comparabile diferă de cele ale prop. evaluate. Ajustările reflectă creșterea sau descreșterea în valoare a proprietății datorită localizării în zonă, și au fost aplicate acolo unde piața recunoaște faptul că o locație este mai bună decât alta, din diferite motive.

Ajustările aplicate reprezintă cât ar plăti un cumpărător tipic, mai mult sau mai puțin, pentru o proprietate amplasată într-o zonă, mai favorabilă sau mai puțin favorabilă, față de proprietatea subiect.

- Datorită faptului ca terenul evaluat se afla în zona Aquaparc, iar comp. 1 se afla în zona Baritiu, după Parc (mai puțin favorabilă în urma analizei de piață), aceasta a fost ajustată cu 31%, ajustarea fiind calculată astfel: diferența între comparabila 1 și 2, comparabila 2 fiind amplasată lângă parc (similar cu proprietatea evaluată).
- Pentru comparabila 2 nu s-au acordat ajustări de localizare - similară cu proprietatea evaluată.
- Datorită faptului ca terenul evaluat se afla în zona Aquaparc, iar comp. 3 se afla în zona Noroieni (mai puțin favorabilă în urma analizei de piață), aceasta a fost ajustată cu 31%, ajustarea fiind calculată astfel: diferența între comparabila 1 și 2, comparabila 2 fiind amplasată lângă parc (similar cu proprietatea evaluată).
- Datorită faptului ca terenul evaluat se afla în zona Aquaparc, iar comp. 4 se afla în zona Baritiu, înainte de parc (mai favorabilă în urma analizei de piață), aceasta a fost ajustată cu -18%, ajustarea fiind calculată astfel: diferența între comparabila 4 și 2, comparabila 2 fiind amplasată lângă parc (similar cu proprietatea evaluată).

AJUSTARI PENTRU DIFERENȚELE DE SUPRAFATA

Ajustările pentru suprafață se aplică atunci când, în urma observațiilor concluzionate în cadrul analizei pieței, rezultă diferențe de preț pe care un cumpărător tipic le va plăti pentru un lot de teren în funcție de suprafața acestuia. În general aceste ajustări sunt aplicate procentual și recunosc cât ar plăti un cumpărător tipic, mai mult sau mai puțin, pentru un lot de teren care diferă prin suprafață față de proprietatea subiect. În cazul nostru avem următoarea situație:

Co_A - nu necesită ajustări

Co_B - nu necesită ajustări

Co_C - nu necesită ajustări

Co_D - nu necesită ajustări

Astfel, pentru <suprafața> nu s-au aplicat ajustări comp. deoarece din analiza pieței imob. specifice a rezultat faptul că diferența de suprafață dintre aceste comparabile și prop. subiect este suficient de mică încât să nu influențeze prețul unitar de vânzare al terenului.

AJUSTARI PENTRU DESTINAȚIA (UTILIZAREA) TERENULUI

Comparabilele utilizate au CMBU similară (intravilan) cu cea a proprietății subiect, astfel încât nu se impune aplicarea unor ajustări.

AJUSTARI PENTRU AMENAJARILE EXTERIOARE

Ajustările pentru tipul de amenajare a drumului din care se realizează accesul se aplică atunci când caracteristicile tipului de drum de acces pentru proprietățile imobiliare comparabile diferă de cele ale proprietății evaluate. Ajustările se exprimă, de regulă, procentual și reflectă creșterea sau descreșterea în valoare a unei proprietăți, datorate tipului de drum de acces către aceasta.

Co_A: amenajat - similar

Co_B: amenajat - similar

Co_C: amenajat - similar

Co_D: amenajat - similar

AJUSTARI PENTRU TOPOGRAFIE/RELIEF

Amplasamentele pot avea valori diferite datorită acestei caracteristici fizice. Pantele abrupte adesea adaugă costuri substanțiale fundației. De asemenea, sistemul natural de drenaj poate fi avantajos sau dezavantajos dacă un amplasamentul este în aval față de alte proprietăți.

Ajustările se exprimă, de regulă, procentual și reflectă variația valorii unui amplasament, datorată topografiei terenului.

Co_A: Similar

Co_B: Similar

Co_C: Similar

Co_D: Similar

Nivelul ajustărilor a fost stabilit pe baza observațiilor istorice din piața specifică, referitoare la efectul pe care îl are asupra valorii terenului, diferența dintre topografia (relieful) comparabilelor și cea a proprietății subiect.

AJUSTARI PENTRU UTILITĂȚILE DISPONIBILE

Prezența/lipsa utilităților și serviciile disponibile amplasamentului, reprezintă o influență importantă asupra valorii amplasamentului.

În general utilitățile sunt asigurate public iar atunci când acestea lipsesc apare nevoia dezvoltării unor sisteme de utilități chiar pe amplasament (fose septice, puțuri de apă etc) sau, de exemplu în cazul lipsei gazului, utilizarea altor tipuri de echipamente/dotări care, funcționând cu alte resurse (lemn, peleti, en el, GPL etc), să conducă la rezolvarea acestei situații. Toate aceste opțiuni conduc inevitabil la efectuarea unor cheltuieli suplimentare, pe care participanții pe piața specifică le recunosc ca pe o sarcină suplimentară.

Pe de altă parte, atunci când utilitățile nu sunt la limita terenului, însă prelungirea lor până la amplasament este posibilă legal și fezabilă economic, participanții pe piața vor percepe această situație ca pe o sarcină pt. rezolvarea creia sunt necesare costuri suplimentare.

Co_A: toate utilitățile - similar

Co_B: toate utilitățile - similar

Co_C: toate utilitățile - similar

Co_D: toate utilitățile - similar

Nivelul ajustărilor ține cont de cât ar recunoaște un cumpărător tipic ca diferența în prețul plătit față de un teren ce dispune de o echipare edilitară diferită față de cea de care dispune proprietatea subiect.

AJUSTARI PENTRU FORMA SI DESCHIDERE

Diferențele dintre dimensiunile terenurilor/amplasamentelor pot afecta valoarea proprietății subiect. Efectele dimensiunii și formei terenului asupra valorii proprietății imobiliare variază odată cu utilizarea ei probabilă. Deoarece utilitatea funcțională a unui teren rezultă adesea dintr-o mărime ideală, optimă sau dintr-un raport lungime-lățime, au fost analizate tendințele valorii atunci când aceste caracteristici ale comparabilei (forma/deschidere) diferă de cele ale subiectului. Tendințele valorii pot fi observate prin studiul vânzărilor de terenuri cu dimensiuni diferite, efectuate pe piață.

A: similar -

B: similar -

C: similar -

D: similar -

Nivelul ajustărilor a fost stabilit pe baza informațiilor istorice privind tendințele valorii în cazul vânzărilor de terenuri cu dimensiuni diferite.

AJUSTARI PENTRU CHELTUIELI DE ADUCERE LA STADIUL DE TEREN CONSTRUIBIL

Atunci când construcțiile nu contribuie la valoarea totală a proprietății, de obicei, se recomandă demolarea. În cele mai multe cazuri, costul conversiei proprietății în teren liber este o penalizare care se scade din valoarea amplasamentului

Asadar, nivelul ajustărilor ține cont de costurile necesare scoaterii de pe amplasament a tuturor construcțiilor demolabile.

Co_A: nu este cazul - similar

Co_B: nu este cazul - similar

Co_C: nu este cazul - similar

Co_D: nu este cazul - similar

Anexa 2 - Abordarea prin cost - estimarea costului de înlocuire net

Metodologia acestei abordari cuprinde urmatoarele etape:

- 1) Stabilirea tipului de cost adecvat, respectiv costul de înlocuire sau costul de reconstruire. Alegerea tipului de cost adecvat trebuie să aibă în vedere vechimea sau unicitatea construcțiilor sau diferența dintre utilizarea pentru care a fost proiectată și cea mai bună utilizare curentă.
- 2) Estimarea costurilor directe și indirecte ale clădirilor și, respectiv, ale construcțiilor speciale, la data evaluării.
- 3) Estimarea profitului sau stimulentei dezvoltatorului.
- 4) Însumarea costurilor rezultate în etapa 3 și a profitului sau stimulentei dezvoltatorului rezultat în etapa 4 pentru a obține costul de nou al construcțiilor.
- 5) Estimarea deprecierei cumulate a fiecărei clădiri sau construcții speciale. Deprecierea cumulată poate fi estimată fie în mod defalcat pe cele trei categorii ale sale – *deprecierea fizică, deprecierea funcțională și deprecierea externă*, fie în mod global (nedefalcată).
- 6) Scăderea deprecierei cumulate din costul de nou al clădirilor, respectiv al construcțiilor speciale, pentru a obține o estimare a costului de înlocuire/reconstruire net.
- 7) Adăugarea valorii terenului la costul de înlocuire/reconstruire net al tuturor construcțiilor (clădiri și construcții speciale) de pe amplasament. Se obține valoarea dreptului absolut asupra proprietății imobiliare subiect.

Costul de înlocuire este costul estimat pentru a construi, la prețurile curente de la data evaluării, o construcție similară care oferă o utilitate echivalentă cu cea a construcției evaluate, utilizând materiale și tehnici moderne, normative, proiecte și planuri actuale.

Baza valorilor estimate a fost "Costul de reconstrucție – Costul de înlocuire, Cladiri industriale, comerciale si agricole, constructii speciale", autor Corneliu Schiopu, editata de catre Editura IROVAL Bucuresti in 2010 impreuna cu indicii de actualizare adecvati. Prin aceasta procedura s-a estimat un deviz general orientativ, pe categorii de lucrari, in functie de caracteristicile tehnico-constructive si gradul de dotare a diverselor categorii de cladiri.

Termenul de *stimulent al dezvoltatorului*, reprezintă suma pe care dezvoltatorul se așteaptă să o primească drept compensație pentru asigurarea coordonării și expertizei necesare, precum și pentru asumarea riscurilor aferente derulării unui proiect. *Profitul dezvoltatorului* reprezintă diferența dintre valoarea de piață a unei proprietăți imobiliare (după finalizarea acesteia și atingerea unei ocupări și/sau a unui venit stabilizat) și costul total de dezvoltare și marketing. În cazul prezentei evaluari nu a fost identificat un profit al dezvoltatorului.

Deprecierea este o pierdere de utilitate a unui activ cauzată de deteriorări fizice, de modificări tehnologice, ale schemelor de evoluție ale cererii și de modificări ale mediului înconjurător, care se concretizează într-o pierdere de valoare.

Deprecierea pe care o suferă o construcție este rezultatul a trei cauze majore, care pot acționa separat sau împreună:

1. Deprecierea fizică – o pierdere de utilitate cauzată de deteriorările fizice ale activului sau ale componentelor sale, ca efect al vechimii sale și al utilizării în condiții normale, care se concretizează într-o pierdere de valoare. Reprezintă uzura generată de folosirea regulată a construcției și de impactul factorilor atmosferici asupra acesteia. Deprecierea fizică poate fi *recuperabilă* sau *nerecuperabilă*

2. Deprecierea funcțională – o pierdere de utilitate cauzată de ineficiența activului subiect în comparație cu substitutul său, care se concretizează într-o pierdere de valoare. Reprezintă o deficiență a construcției, a materialelor sau a proiectului care diminuează funcțiunea, utilitatea și valoarea construcției. Deprecierea funcțională poate fi *recuperabilă* sau *nerecuperabilă*

3. Deprecierea externă (economică) – o pierdere de utilitate cauzată de factori din exteriorul activului, în special factori legați de modificările în cererea și oferta produselor realizate cu aportul aceluși activ, care se concretizează într-o pierdere de valoare. Reprezintă afectarea temporară sau permanentă a utilității sau vandabilității unei construcții sau a unei proprietăți din cauza unor influențe negative exterioare proprietății. (Deprecierea externă poate fi rezultatul condițiilor de piață nefavorabile. Din pricina caracterului imobil, proprietatea suferă influențe externe pe care, de obicei, proprietarul sau chiriașul nu le poate controla).

Atunci când pentru a formula o estimare asupra deprecierei externe, sunt studiate informațiile de piață, trebuie analizată alocarea pierderii pe care proprietatea o înregistrează, din cauze externe. Deprecierea externă poate fi atribuită în întregime terenului sau în alte situații, ea poate fi atribuită în întregime clădirilor. Adesea, deprecierea externă poate fi alocată între teren și clădiri. Acest lucru este extrem de important dacă deprecierea externă este deja reflectată în estimarea valorii terenului. Efectul factorilor externi asupra valorii terenului nu reprezintă o depreciere externă ci pur și simplu efectul forțelor pieței asupra valorii acestuia. Deprecierea externă, este în mod specific o pierdere de valoare, produsă de influențele externe, și alocate îmbunătățirilor. O pierdere a valorii terenului nu reprezintă o depreciere, pierdere de valoare a terenului, atribuită factorilor externi, va fi contabilizată în abordarea prin cost, prin estimarea valorii terenului.

În continuare sunt prezentate fisele de calcul pentru estimarea valorii de piață a clădirilor și teren aferent prin metoda costurilor segregate.

Descriere

Teren de vanzare în localitatea Vălu lui Trăian!

Va propun spre vanzare un teren intravilan construitibil, teren în suprafața de 662 mp cu deschidere de 30 m situat în loc. Vălu lui Trăian, str. Constantin Brancoveanu, nr. 2.

Terenul este ideal pentru investiție - construcție imobil. Se poate vinde parțelat dacă sunt solicitați pentru jumătate din suprafața. Peisajul este mirific, o zonă extrem de liniștită!

Întreaga zonă se află în planul urbanistic de dezvoltare locală și este înconjurată de toate utilitățile (apa caldă și rece, canalizare, gaze).
